

rubai

Full System Specification

v2 visual redesign rollout. Source of truth for everything we agreed to build.

1. Identity & Brand

- Product name: rubai (lowercase wordmark).
- Brand mark: the green dot above the 'i' in rubai. This dot is the entire brand identity.
 - Reused as the assistant's avatar in chat (replaces the old 'A' letter avatar).
 - Reused as the 'thinking' animation when the AI is processing.
- Palette: cream background + emerald primary. Light mode and dark mode both fully supported.
- Typography: Inter only across the entire app. No serif typeface anywhere. Weights 400 / 500 / 600.
- Tone: calm, structured, momentum-focused. Not playful, not generic-AI.

2. Theme Behavior (Appearance)

- Default: follow system theme (light or dark).
- User can override at Account -> Appearance: System / Light / Dark.
- Both themes maintain the cream+emerald palette. Dark mode is a darker neutral background with the same emerald primary, not pure black.

3. Navigation

Bottom tab order, left to right:

1. Today
 2. Roadmap
 3. Coach (elevated center tab - raised sparkle disc above the tab bar)
 4. Goals
 5. Account
- The Coach tab is visually distinguished as an elevated emerald disc with a sparkle icon, raised about 22px above the rest of the tab bar. This is the home of the AI experience.
 - On iOS LiquidGlass tabs, Coach uses the native 'sparkles' SF symbol.
 - Behavioral Insights is NOT a tab - it lives as a dedicated screen pushed from Account.

4. Brand Dot Component (BrandDot)

A single reusable component used everywhere the brand dot appears.

Modes

- static - solid green dot (used as chat avatar).
- idle - gentle pulse (used in headers / hero areas at rest).
- thinking - vertical 3-dot checklist progression: top dot lights up, then middle, then bottom, looping. Reads as execution / momentum, not a generic spinner.

Sizes

- sm, md, lg, xl, hero.

Used as

- Chat assistant avatar, typing indicator, screen-header brand mark.

5. AI Across the App (non-negotiable)

AI features stay on EVERY screen. The redesign visually unifies them - it does NOT remove any of them.

Preserved AI capabilities

- Coach chat (text + voice).
 - Voice transcription (mic input).
 - Text-to-speech (read assistant replies aloud).
 - Image attachments to chat.
 - Smart vs Fast model toggle.
 - Proposed action cards (the AI suggesting concrete next steps).
 - Suggested reply chips.
 - Coach memory banner (what the AI is currently holding in mind).
 - 'Ask Coach' shortcuts on other screens (additive, not replacing existing functionality).
-

6. Screen-by-Screen Redesign

Rolling out in this order. Each screen is reviewed by you before moving to the next.

6.1 Coach screen - DONE

Header:

- Small COACH eyebrow label (emerald, uppercase, letter-spaced).
- Large rubai wordmark (AtlasLogo size lg).
- Subtitle: 'Working on: <active goal headline>'.
- ActiveGoalChip on the right (tap to switch active goal).

Memory banner (existing, kept) - shows what the coach currently remembers; tappable to expand/collapse.

Chat list:

- Assistant avatar = BrandDot (static, md).
- User bubble = primary emerald.
- Uniform 18px bubble corners, hairline border.
- Typing indicator = BrandDot thinking mode (vertical checklist progression).
- Status caption above composer: inline tappable text 'SMART MODE - VOICE OFF' (or FAST MODE / VOICE ON). Each segment toggles independently. 'TRANSCRIBING...' appended when mic is active.
- Cold-start suggestions: soft muted-bg pills (no border), e.g. 'I'm feeling stuck today'.
- Composer: rounded 22px input, attachment + mic + send affordances.
- Bottom padding clears the elevated center tab.

6.2 Today screen - NEXT

- Add a Focus Pulse card at the top (single most important thing right now).
- Keep all existing AI features.
- Apply v2 visual style (eyebrow + wordmark + Inter, cream/emerald, brand dot accents).

6.3 Roadmap screen

- Today's anchors section (the small handful of things anchored to today).
- 4-WEEK ARC view (the longer-range view).
- v2 visual style applied.

6.4 Account screen

Three groupings only - nothing else for now:

1. IDENTITY (who you are: name, profile, etc.)
2. EXPERIENCE (Appearance / theme override, Behavioral Insights link, etc.)
3. SESSION (sign out, etc.)

Explicitly REMOVED from Account in this version:

- Cloud & Devices
- Adaptive
- Data Sovereignty

(They may return later but are out of scope for v2.)

6.5 Goals screen

- v2 visual style applied.
- Keep all existing functionality.

6.6 Behavioral Insights screen

- New dedicated screen.
- Pushed from Account -> Experience -> Behavioral Insights.
- Shows patterns the AI has observed about the user's behavior over time.

7. Components Inventory

Component	Status	Purpose
BrandDot	Built	Brand mark + thinking animation
ChatBubble	Updated	Uses BrandDot avatar
AtlasLogo	Existing	rubai wordmark with green dot
ActiveGoalChip	Existing	Switch active goal from Coach header
ProposedActionCard	Existing	AI's suggested next step
SectionHeader	Existing	Eyebrow + title + subtitle pattern
EmptyState	Existing	Empty-state illustrations
Elevated Coach tab button	Built	Raised sparkle disc in tab bar
Focus Pulse card	TODO	Today screen hero card
Behavioral Insights screen	TODO	Pushed from Account
Appearance (System/Light/Dark)	picker TODO	Account -> Experience

8. Out of Scope for v2

- Cloud & Devices section in Account.
- Adaptive section in Account.
- Data Sovereignty section in Account.
- Removing or downgrading any AI capability.
- Serif typography anywhere.
- Replacing Coach with anything other than the AI chat experience.

9. Rollout Order (recap)

1. Coach - DONE, awaiting your visual sign-off on Android.
2. Today - Focus Pulse card + v2 style.
3. Roadmap - Today's anchors + 4-WEEK ARC + v2 style.
4. Account - IDENTITY / EXPERIENCE / SESSION grouping + Appearance override.
5. Goals - v2 style.
6. Behavioral Insights - new dedicated screen pushed from Account.

After all six screens are approved, we'll do a final pass for cross-screen consistency and then publish.
